PROFESSIONAL SUMMARY

Senior Distributed Systems and Cloud Engineer with 5+ years of experience building resilient microservices, high-throughput streaming systems, and cloud-native infrastructure.

WORK EXPERIENCE

ScaleFlow Technologies — Lead Infrastructure Engineer (2022 - Present)

- Architected multi-region Kubernetes clusters supporting over 200k RPS with 99.999% SLA availability.
- Reduced AWS infrastructure costs by \$340k annually by deploying intelligent spot instance auto-scalers.
- Decreased p99 API query latency by 45% using distributed Redis caching and gRPC streaming.
- Led an engineering squad of 6 engineers across CI/CD and production site reliability initiatives.

CloudPulse Inc — Senior Software Engineer (2020 - 2022)

- Designed high-scale event ingestion pipeline processing 50M events daily via Apache Kafka and Go.
- Zero-downtime migration of multi-terabyte transactional database from PostgreSQL to CockroachDB.
- Optimized batch ingestion throughput by 3.5x using parallel Goroutines and memory pools.

EDUCATION

Stanford University — M.S. in Computer Science (2018 - 2020)

UC Berkeley — B.S. in Electrical Engineering & Computer Sciences (2014 - 2018)

TECHNICAL SKILLS

Languages: Python, Go, Rust, TypeScript, SQL, Bash

Cloud & DevOps: AWS, Kubernetes, Docker, Terraform, Helm, GitHub Actions

Databases & Messaging: PostgreSQL, CockroachDB, Redis, Apache Kafka, DynamoDB

Architecture: Distributed Systems, Microservices, gRPC, Event-Driven Systems, High Availability
